<b>P. Injury Prevention</b>	<input type="checkbox"/> Performed <input type="checkbox"/> Not Performed	

1. The test should have been performed on children born in a Michigan hospital on or after 10/1/87. For other children with all or some black heritage, the test is required prior to the child's 21st birthday unless electrophoresis for sickle cell was done when the child was at least 6 months of age and the results are known to the parent.

2. Testing should be done upon recognition of high risk factors. If results are negative but high risk situation continues, testing should be repeated on an annual basis.
